Executive Decision Report

Growing revenue and retention through data-driven decisions

Business Intelligence Capstone | Prepared for the C-suite

Presenter: [Your Name] | October 2026

Executive Summary

The situation

Revenue is growing, but rising acquisition cost and monthly churn are eroding margin.

The insight

A small set of segments and channels drives most revenue; retention is the largest untapped lever.

The ask

Approve 3 initiatives (about $480K) projecting roughly 2.6x ROI within 18 months.

Decisions requested today

1. Launch a retention program for high-value customers
2. Reallocate marketing spend toward the lowest-CAC channels
3. Raise AOV with bundling and tiered free-shipping thresholds

Business Context & Objectives

Objectives

Grow revenue 15% YoY, cut CAC 20%, reduce monthly churn below 4%, and lift AOV 10%.

Scope

Customer, order and marketing data across all regions and channels, last 24 months.

Why now

Competitors are discounting aggressively. Acting on retention and channel efficiency protects margin without a price war.

Methodology

1 Ingest & Clean
Pandas pipeline, deduplication, null handling

2 Define KPIs
KPI dictionary with formulas and owners

3 Explore
EDA, correlations, anomaly checks

4 Test
3 hypothesis tests ($p < 0.05$)

5 Visualize

Data quality contract enforced completeness, uniqueness and validity checks before any figure reached this deck.

KPI Snapshot

Revenue	CAC	Churn	AOV
$4.8M	**$62**	**5.4%**	**$78**
+12% YoY	+9% YoY (worse)	monthly, flat	+3% YoY

Takeaway: growth is being bought, not earned. CAC is rising faster than AOV, so each new customer is less profitable.

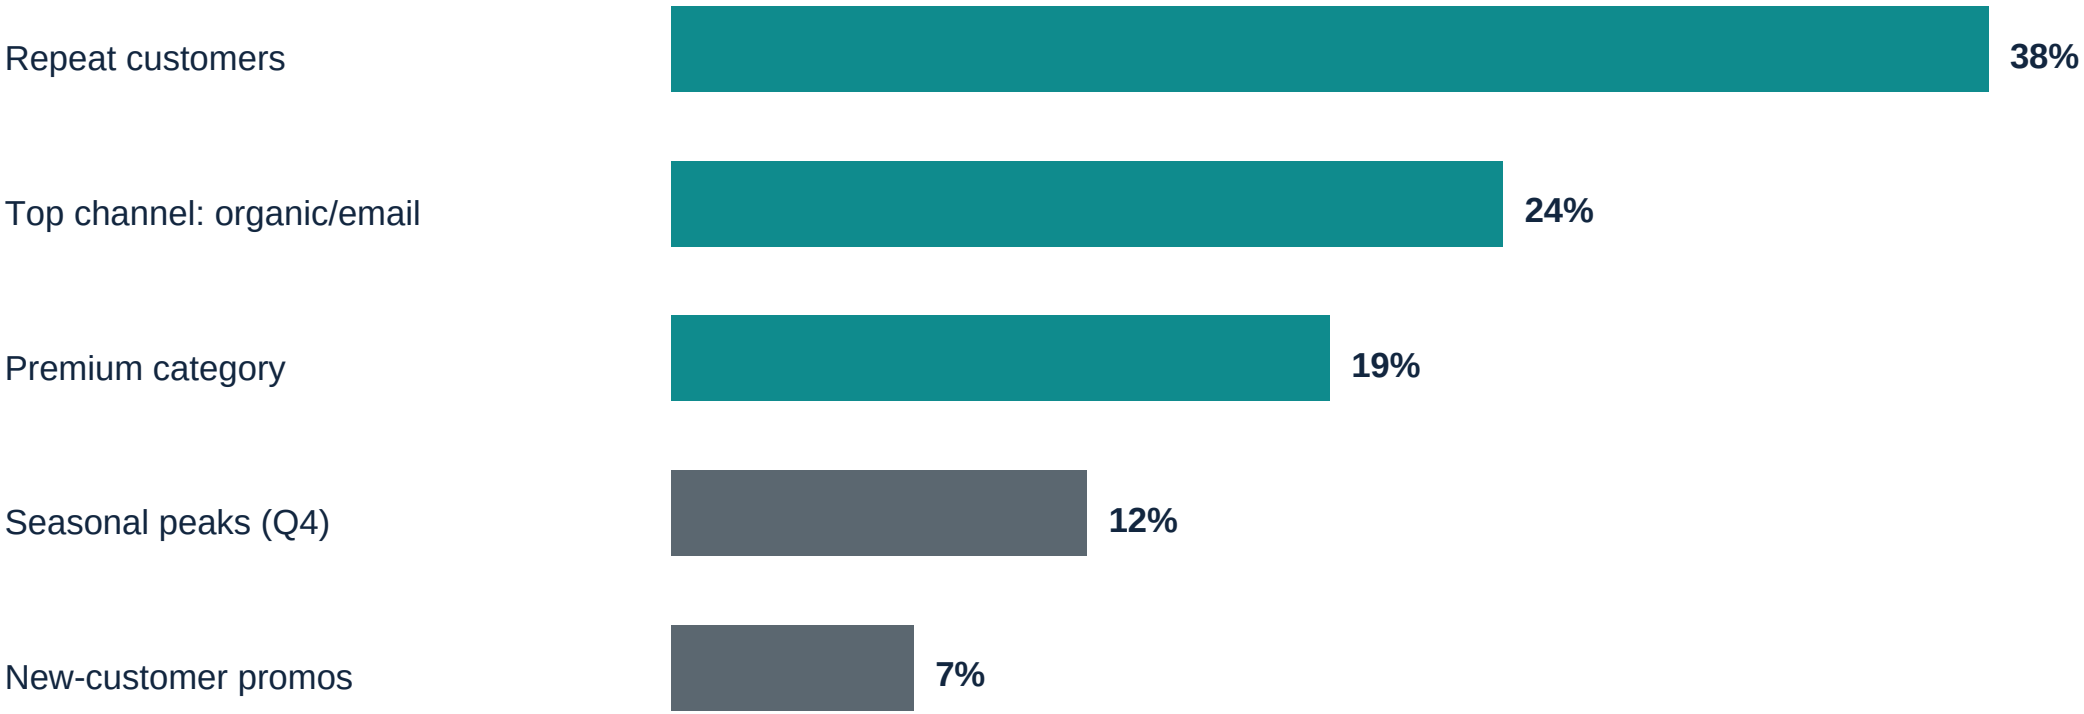
Key Revenue Drivers



Share of revenue (illustrative). Repeat customers and organic channels generate over 60% of revenue at the lowest cost.

Risk Areas

Risk	Evidence	Impact	Level
Rising CAC	CAC up 9% YoY	Margin erosion	**High**
Customer churn	5.4% monthly	Lost lifetime value	**High**
Revenue concentration	Top 3 segments = 60%	Volatility	**Medium**
Data quality gaps	Missing values in key fields	Decision error	**Medium**

Illustrative figures - replace with results from your own analysis

Three Strategic Recommendations

1. Retain

Launch loyalty and win-back program for the top customer segments. Target: churn from 5.4% to 4.0%.

2. Reallocate

Shift 30% of paid spend to email, referral and organic. Target: CAC down 20%.

3. Upsell

Introduce bundles and a free-shipping threshold. Target: AOV up 10%.

ROI Projections (18 months)

Initiative	Investment	Gain	ROI
1. Retention program	$180K	$520K	2.9x
2. Channel reallocation	$120K	$310K	2.6x
3. Bundling & upsell	$180K	$420K	2.3x
Total	**$480K**	**$1.25M**	**2.6x**

ROI = projected incremental gross profit / investment. Assumes conservative uptake; see appendix notebook for sensitivity analysis.

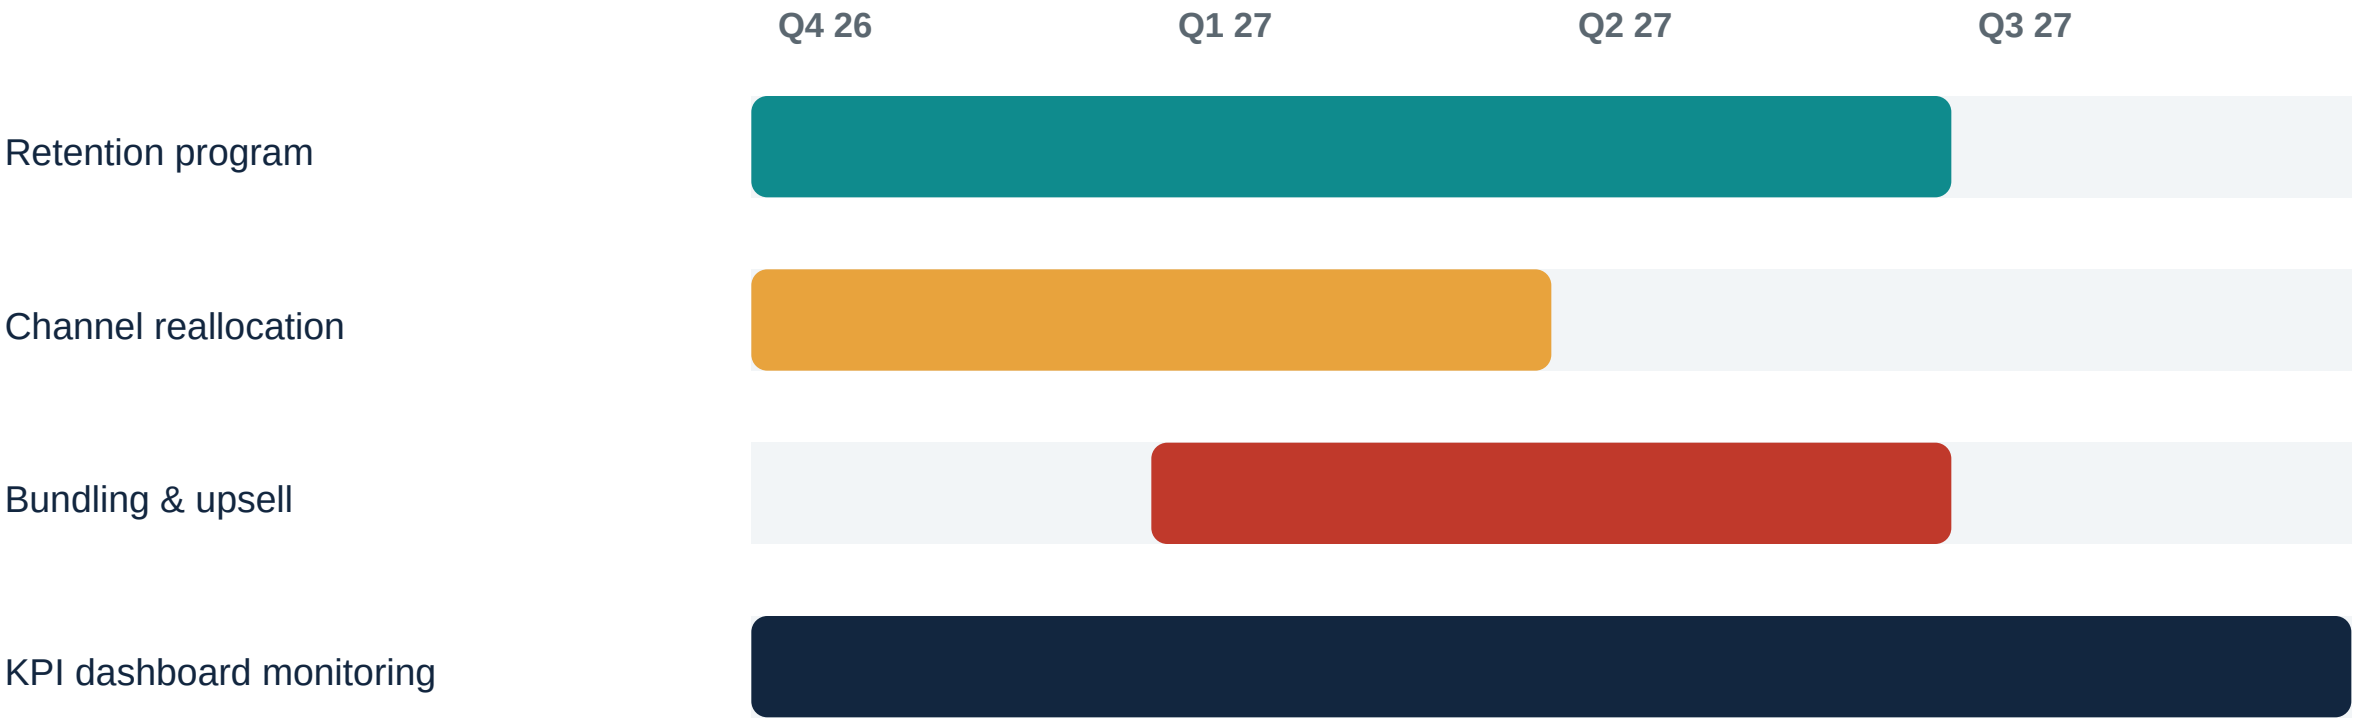
Implementation Timeline



Milestone reviews at 90 days; go/no-go gates tied to CAC, churn and AOV targets.

Decision Requested

Approve

Budget of $480K across three initiatives and a named executive owner for each.

Success metrics

Churn below 4%, CAC down 20%, AOV up 10% within 18 months.

Next steps: kickoff within 30 days, first KPI review at 90 days.
